Ad-Aware SE Personal, Build 1.06r1
Preparing System Scan

Scan Mode

Please choose a scan mode, then click "next" to continue

Select a scan mode:
- Perform smart system scan
- Perform full system scan
- Use custom scanning options
- Scan volume for ADS
- Search for negligible risk entries
- Search for low-risk threats

You have the option of changing the scan settings. Unless you are the only one that uses the computer, we recommend occasionally checking the "Perform full system scan" to have Ad-Aware check all of the files on the computer, rather than just your files.
After selecting the scan mode, click on "Next".
A scan will typically take a few minutes, but it is highly dependent on the number of files on your computer, as well as its speed.
Once the scan is finished, click on "Next".
This is the list of spyware that AdAware found. Right-click on the list to bring up this context menu.
From the context menu, click on "Select All Objects".
After selecting all of the spyware that Ad-Aware found, click on "Next".
Ad-Aware SE confirms that you want to delete the selected objects. Click on "OK".
After removing the spyware, Ad-Aware shows its statistics page. Click on the red "X" in the upper-right corner to close Ad-Aware.
